Abstracts

The automotive charging system is an essential electrical subsystem within vehicles, responsible for generating, regulating, and distributing electrical power to support engine operation and auxiliary functions. It primarily consists of the alternator, which converts mechanical energy from the engine into alternating current (AC) electricity; the voltage regulator, which maintains a stable output to prevent overcharging or undercharging; and the battery, which stores electrical energy for starting the engine and powering electronic components when the engine is off. This system ensures that all electrical loads?such as ignition, lighting, infotainment, and advanced driver-assistance systems (ADAS)?receive consistent and reliable power, thereby playing a critical role in vehicle performance, safety, and longevity.

The global Automotive Charging System market size was estimated at USD 18750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.50% during the forecast period.
