Abstracts

The automotive clutch disc is a friction component within manual transmission systems that serves as the critical interface between the engine and transmission, allowing for the controlled engagement and disengagement of power flow during gear shifts by transmitting torque through friction when pressed against the flywheel and pressure plate. It consists of a splined hub mounted on the transmission input shaft, friction linings typically made of organic, ceramic, or metallic materials bonded to both sides of a rigid disc, and often includes cushioning springs or dampers to absorb torsional vibrations and reduce driveline shock. Designed to withstand high thermal and mechanical stresses, its performance directly impacts vehicle drivability, shift smoothness, and durability, with variations in design and materials tailored to specific applications ranging from passenger cars to heavy-duty commercial vehicles.

The global Automotive Clutch Disc market size was estimated at USD 4325.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
