Abstracts

The automotive clutch system is a mechanical or electro-mechanical assembly that transmits rotational power from the engine to the transmission and ultimately the wheels, allowing for the smooth engagement and disengagement of the drivetrain during gear shifts and vehicle stops. It consists of key components such as the clutch disc, pressure plate, release bearing, and flywheel, operating on the principle of friction to temporarily disconnect the engine's output from the transmission, enabling seamless gear changes without stalling the engine. While traditional manual clutches rely on driver-operated pedals and hydraulic or cable linkages, advancements have led to the development of automated manual transmissions (AMTs) and dual-clutch systems (DCS), which use electronic actuators and control units to automate clutch operation, improving efficiency and driving comfort. The system is integral to vehicle performance, affecting acceleration, fuel economy, and drivability, and remains a critical subsystem in both conventional internal combustion engine vehicles and emerging hybrid electric architectures.

The global Automotive Clutch Systems market size was estimated at USD 11250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
