Abstracts

Automotive coolant, also known as antifreeze, is a liquid substance that circulates through an internal combustion engine and draws off excessive heat. The two most common chemicals used for this are ethylene and propylene glycol, both of which have lower freezing points than water (32° Fahrenheit or 0° Celsius). This allows the chemicals to flow freely even under cold winter conditions. Automotive Coolant also has a higher boiling point than pure water, which makes it ideal for summer use as well.

The global Automotive Coolant market size was estimated at USD 5498.9 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.02% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Automotive Coolant market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
