Report Overview

The crash sensor is the control signal input device in the airbag system. Its function is to detect the intensity signal of the car collision by the crash sensor and input the signal into the airbag computer. The airbag computer determines whether to detonate the inflator to inflate the airbag according to the signal from the crash sensor.

Most of the crash sensors adopt inertial mechanical switch structure, which is equivalent to a control switch, and its working state depends on the acceleration of the car when it collides. According to the structure, it can be divided into two types: mechanical and electronic. The mechanical type has rolling ball type, roller type, eccentric ball type.
