Report Overview

Automotive display can be simply divided into TFT-LCD display screens and non-TFT display. TFT-LCD displays usually display images, and non-TFT displays usually display characters. In terms of performance, compared with traditional display screens, automotive display screens have higher reliability requirements, and can withstand a high temperature of 90 degrees for at least 1000 hours, so the price is higher than traditional display screens. JDI is currently the dominant player in the automotive display field, occupying the high-end market, especially the instrument market. Followed by AUO, the main customers are Panasonic, Alpine, Single World, Fujitsu Ten, etc. Mainland China LCD panel manufacturers, such as Tianma and Truly, also entered the automotive panel market in 2015. Taking advantage of the growing domestic demand, it is expected that mainland Chinese panel manufacturers will increase their share in the automotive TFT-LCD display market.
