Abstracts

Elastomers are unstructured polymers prevailing beyond their glass transition temperatures such that significant motion is possible. Elastomers have very low intermolecular strength, low modulus of elasticity, and high strain of failure as compared to other materials. Carbon, hydrogen, oxygen and silicon monomers link to form the polymer, which eventually forms elastomers. There are two major elastomers used in automotive applications: synthetic and thermoplastic. Automotive elastomers are used in the production of components that need to withstand extreme temperatures such as hoses, insulators, seals, bushes, engine mounts, and gaskets.

The global Automotive Elastomers market size was estimated at USD 41940.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Automotive Elastomers market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
