Abstracts

The automotive electric engine market refers to the global industry focused on the development, manufacturing, and distribution of electric propulsion systems used in electric vehicles (EVs), including battery electric vehicles (BEVs), hybrid electric vehicles (HEVs), and plug-in hybrid electric vehicles (PHEVs). These engines, primarily comprising electric motors, power electronics, inverters, and associated control systems, convert electrical energy stored in batteries or generated by fuel cells into mechanical energy to drive vehicle wheels. The market is characterized by rapid technological advancements in motor efficiency, power density, thermal management, and integration with vehicle architectures, driven by the global shift toward electrification to reduce carbon emissions and dependence on fossil fuels. Key segments include permanent magnet synchronous motors (PMSMs), induction motors, and emerging technologies like axial flux motors, with applications spanning passenger cars, commercial vehicles, and two-wheelers. Growth is propelled by stringent emissions regulations, government incentives, declining battery costs, and increasing consumer adoption of electric mobility, while challenges include supply chain constraints for rare-earth materials, high initial costs, and infrastructure development for charging networks.

The global Automotive Electric Engine market size was estimated at USD 52075.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
