Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive Electric Power Steering competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Automotive Electric Power Steering production reached approximately 74.32 million units, with an average global market price of around US\$ 247 per unit. Automotive Electric Power Steering (EPS) is a system that assists the driver in steering the vehicle by using an electric motor instead of a traditional hydraulic pump. It adjusts the level of steering assistance based on vehicle speed and driving conditions, enhancing both control and fuel efficiency. EPS systems typically include components such as an electric motor, control unit, torque sensors, and steering gear, allowing for more precise and responsive handling. The automotive electric power steering market represents a key segment in the broader automotive components industry, closely linked to trends in vehicle electrification, safety regulations, and driver assistance technologies. As automotive manufacturers seek to reduce fuel consumption and emissions, EPS systems have increasingly replaced hydraulic systems due to their superior efficiency and ease of integration with electronic control units. EPS not only supports steering but also enables features such as lane-keeping assist, automatic parking, and advanced driver assistance systems (ADAS). The market is driven by the growing demand for intelligent steering solutions in both internal combustion engine vehicles and electric vehicles. In addition, the need for weight reduction, lower maintenance costs, and enhanced driving experience further promotes the adoption of EPS across various vehicle segments. With continuous advancements in sensor technology and software algorithms, EPS systems are expected to play an even more central role in the transition to autonomous and semi-autonomous vehicles.

The global Automotive Electric Power Steering market size was estimated at USD 18321.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.20% during the forecast period.
