Abstracts

An electric water pump is powered by the vehicle's electrical system. There can be up to two or three water pumps in an EV. The ECU turns them on only when their circuit needs cooling. That way, the system has more targeted cooling, which helps reduce the load on the battery. Additionally, some vehicles also have a water pump just to provide cabin heat. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.

The global Automotive Electric Water Cooling Pumps market size was estimated at USD 3546.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.00% during the forecast period.
