Abstracts

Automotive engine cylinder sleeves, also known as cylinder liners, are cylindrical components that are inserted into the engine block's cylinder bore. They serve as a protective layer inside the engine block, providing a smooth and wear-resistant surface for the piston rings to move against. Cylinder sleeves are typically made from materials like cast iron or steel and are crucial in maintaining the structural integrity and durability of an engine over its lifespan. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively.
