Abstracts

Automotive engine degreasers are specialized chemical formulations designed to dissolve and remove accumulated grease, oil, dirt, and grime from engine bays and mechanical components. These products typically come in spray, foam, or liquid forms and are engineered to penetrate stubborn deposits while being compatible with common engine materials such as metals, plastics, and rubber. They often incorporate surfactants, solvents, and emulsifiers to break down hydrocarbons and facilitate rinsing, with many modern variants emphasizing biodegradable, water-based, or low-VOC formulations to meet environmental and safety regulations. The primary function is not only aesthetic?improving the appearance of the engine compartment?but also practical, as a clean engine allows for easier detection of leaks, improves heat dissipation, and supports overall vehicle maintenance.

The global Automotive Engine Degreasers market size was estimated at USD 260.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
