Report Overview

Automotive engine oil coolant primarily is used to keep the engine temperatures in control and thus avoid overheating of the engine, and eventual engine seize. The automotive engine oil coolant absorbs heat from the engine eventually dissipating it to the engine radiator. The oil coolant also helps in protecting the inner surfaces of the different metal components that are continuously exposed to friction and heat, from rusting or corrosion. Thus the engine oil coolant serves the dual purpose of cooling the engine and rust protection

The global Automotive Engine Oil Coolant market size was estimated at USD 3568.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
