Abstracts

Under the trend of vehicle electrification, the amount of information transmission in the vehicle continues to increase, and domain/cross-domain centralized architecture has gradually become the mainstream of smart driving vehicles. The traditional vehicle network is dominated by CAN bus, supplemented by LIN bus, and multiple bus technologies coexist. Automotive Ethernet has the advantages of high data transmission capability, good reliability, low EMI/power consumption/latency, and lightweight wiring harness. With the development of automobile intelligence, in-vehicle Ethernet will be the first to be used in smart cockpits and assisted driving, and will gradually replace the entire vehicle communication architecture in the future.

The global Automotive Ethernet Chip market size was estimated at USD 3397.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 25.90% during the forecast period.
