Abstracts

The Evaporative Emission Control (EVAP) System seals the fuel system of the vehicle to prevent fuel vapors from the fuel tank and fuel system from escaping into the atmosphere. This is important because fuel vapors contain a variety of hydrocarbons. Hydrocarbons form smog when they react with air and sunlight. Gasoline evaporates very quickly, so if the fuel system is open to the atmosphere a vehicle can pollute 24 hours per day without even being turned on. These uncontrolled evaporative emissions account for as much as 20% of the pollution produced by a vehicle.

The global Automotive Evaporative Emission Control System market size was estimated at USD 1184.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
