### Report Overview:

The evaporator is another device that looks similar to a car radiator. It has tubes and fins and is usually mounted inside the passenger compartment behind the fascia above the foot well. As the cold low-pressure refrigerant is passed into the evaporator, it vaporises and absorbs heat from the air in the passenger compartment. The blower fan inside the passenger compartment pushes air over the outside of the evaporator, so cold air is circulated inside the car. The blower inside the vehicle is use to blow air over the evaporator. This cools the air which is then blown from the vents.

The Global Automotive Evaporators and Blowers Market Size was estimated at USD 2856.02 million in 2023 and is projected to reach USD 3216.34 million by 2029, exhibiting a CAGR of 2.00% during the forecast period.
