Report Overview

The Electric Vacuum Pump (EVP) is a critical component in modern automotive braking systems, particularly in hybrid and electric vehicles (EVs), where traditional engine-driven vacuum sources are absent. It generates the necessary vacuum pressure to power brake boosters, ensuring reliable braking performance. EVPs are typically compact, energy-efficient, and designed to operate quietly, making them ideal for electric and hybrid platforms that prioritize energy conservation and noise reduction. Their adoption is driven by stringent emissions regulations and the shift toward electrification, as they eliminate the need for engine vacuum, reducing parasitic losses and improving overall vehicle efficiency. The technology is increasingly integrated into advanced driver-assistance systems (ADAS) and autonomous vehicles, where consistent brake performance is essential. The market for automotive EVPs is expanding rapidly, supported by the growing EV market and regulatory pressures to phase out internal combustion engines (ICEs). Key players are focusing on durability, lightweight designs, and smart pump systems with adaptive control to meet diverse OEM requirements.

The global Automotive EVP (Electric Vacuum Pump) market size was estimated at USD 1948.06 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.88% during the forecast period.
