Abstracts

Automotive four post lifts are specialized vehicle service equipment designed for safe and stable lifting of cars, trucks, and other vehicles, primarily used in repair shops, dealerships, and garages for tasks including maintenance, inspections, storage, and detailing. These systems consist of four vertical columns connected by runways and are operated hydraulically or electrically, allowing vehicles to be raised to a working height without requiring alignment on the lift arms, making them especially suitable for long-term storage, wheel-off services, and alignment checks. Unlike two-post lifts, four post lifts distribute weight evenly across the runways, offering higher weight capacities and enhanced stability for heavier vehicles, which positions them as a preferred solution in commercial and professional automotive service environments where safety, load capacity, and versatility are critical.

The global Automotive Four Post Lift market size was estimated at USD 289.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.65% during the forecast period.
