Abstracts

The automotive front windscreen, also referred to as the windshield, is a laminated safety glass component installed at the front of a vehicle, designed primarily to protect occupants from wind, debris, and weather elements while ensuring structural integrity and driver visibility. It consists of two layers of glass bonded with a polyvinyl butyral (PVB) interlayer to prevent shattering upon impact, thereby reducing injury risks. Beyond its protective function, modern windscreens integrate advanced technologies such as rain sensors, heads-up displays (HUD), heating elements for defrosting, and mounting points for cameras and sensors essential to advanced driver-assistance systems (ADAS), making it a critical and increasingly sophisticated part of vehicle safety, aerodynamics, and connectivity.

The global Automotive Front Windscreen market size was estimated at USD 25146.78 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
