Abstracts

Automotive Grade ToF Image Sensor is a depth sensor used in the automotive field. By measuring the time difference between emission and reflection of light, it can accurately measure the distance between an object and the sensor, thereby generating a 3D environment map around the vehicle. Fusion and complementation with other sensors will be an important trend in the development of ToF image sensors in the future. Although the ToF image sensor can provide high-precision 3D environment perception, it also has certain limitations, such as limited detection angle and range, and sensitivity to environmental lighting conditions. Therefore, integrating and complementing ToF image sensors with other sensors (such as radar, cameras, etc.) can further improve the vehicle's perception capabilities and safety.

The global Automotive Grade ToF Image Sensor market size was estimated at USD 684.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
