### Report Overview:

Hardware-in-the-loop simulation (HIL) is a development and testing technique for real-time embedded systems. Hardware-in-the-loop simulation provides a dynamic system model, which can simulate a real system environment, add mathematical representation of relevant dynamic systems, and connect it with a simulation system platform through input and output of the embedded system. HIL systems provide an effective platform, which can reduce the complexity of plant and control test platforms. HIL technology provides high-quality output and reduces the cost involved and time required, so it is widely preferred in many applications (such as aerospace, automotive, etc.).
