## Abstracts

Automotive headrest stays are structural components integrated into vehicle seats, specifically designed to support and position headrests at optimal heights and angles for occupant safety and comfort. These metal or high-strength polymer rods or brackets are engineered to withstand dynamic forces during collisions, helping to minimize whiplash injuries by limiting excessive head movement, while also allowing for adjustable positioning to accommodate drivers and passengers of varying sizes. Their design must comply with stringent automotive safety standards, including crash testing and durability requirements, and they are typically manufactured as part of a seat's frame assembly, contributing to both the functional and ergonomic performance of modern automotive seating systems.

The global Automotive Headrest Stays market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
