Abstracts

Automotive heat pump systems are advanced thermal management solutions that leverage refrigeration cycles to efficiently transfer heat from one area to another, functioning as both a heating and cooling mechanism for electric vehicles (EVs) and increasingly for hybrid vehicles as well. Unlike traditional resistive heaters that generate heat directly through electrical energy, heat pumps absorb ambient or waste heat from components like the battery or motor, significantly improving energy efficiency and extending driving range in cold weather conditions. These systems integrate compressors, evaporators, condensers, and reversing valves to enable bidirectional heat flow, offering precise cabin temperature control while minimizing power consumption.

The global Automotive Heat Pump System market size was estimated at USD 5880.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 17.50% during the forecast period.
