Abstracts

An automotive heater blower is a critical component of a vehicle's heating, ventilation, and air conditioning (HVAC) system, responsible for circulating air—whether heated, cooled, or ambient—throughout the cabin to ensure passenger comfort and safety. This electromechanical device typically consists of an electric motor and a fan or impeller assembly, which draws air from the vehicle's exterior or recirculates interior air, forcing it through the heater core or evaporator before directing it via ducts to designated vents. The blower's speed is often adjustable through a resistor pack or electronic control module, allowing drivers to regulate airflow intensity. Its performance directly impacts defogging, defrosting, and climate control efficiency, making it essential for maintaining visibility and cabin temperature in diverse driving conditions.

The global Automotive Heater Blower market size was estimated at USD 3265.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
