### Report Overview:

The stabilizer bar, also known as sway bar, minimizes body roll in the vehicle during cornering. The conventional stabilizer bar is used to improve vehicle handling performance of muscle car. There are primarily two types of stabilizer bars: solid stabilizer bar and hollow stabilizer bar. Vehicle manufacturers focus on thickness and diameter of the bar in order to select the perfect stabilizer bar. Hollow stabilizer bar is performing better than solid stabilizer bar due to its light weight, high torsional rigidity, coupled with easy installation. These factors make the hollow stabilizer bar highly preferable by automakers presently. Auto manufacturers are focusing on reducing the overall weight of the vehicle in order to enhance vehicle performance. The hollow stabilizer bar offers additional safety to drivers while driving and minimum body roll, which enhances the tire performance.
