Abstracts

An automotive intake system is a critical engine component responsible for delivering a precisely metered mixture of air and fuel to the combustion chamber, directly impacting engine performance, efficiency, and emissions. It typically consists of an air filter, mass airflow sensor, throttle body, and intake manifold, with designs varying significantly based on engine type?naturally aspirated, turbocharged, or supercharged?and vehicle application, from passenger cars to high-performance and commercial vehicles. Modern systems increasingly incorporate advanced materials like composite plastics for weight reduction and integrated electronic sensors for real-time airflow management, aligning with stringent global emission standards and the growing demand for fuel economy without sacrificing power output.

The global Automotive Intake Systems market size was estimated at USD 26250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
