The automotive smart cockpit integrated chip, also known as the smart cockpit SoC chip, is a highly integrated electronic device that is mainly used to implement various functions of the automotive smart cockpit. It integrates multiple processing units such as central processing unit (CPU), graphics processing unit (GPU), and neural network unit (NPU), and supports multiple functions such as high-performance computing, graphics computing, AI computing, and audio processing. This chip can provide powerful computing performance and is the key core for the automotive cockpit domain controller to achieve multi-hardware fusion control. The application of smart cockpit integrated chips can improve the intelligence level of car cockpits and provide a more intelligent, comfortable and safe driving experience. With the development of smart cars, the automotive electronic and electrical architecture is undergoing a transformation from distributed to centralized. As an important part of the domain controller, the smart cockpit integrated chip will be deeply integrated with other core components such as autonomous driving chips and in-vehicle entertainment systems to achieve vertical integration. This will further improve the level of vehicle intelligence and integration and reduce overall costs. Smart cockpit integrated chips need to have powerful AI processing capabilities and data processing capabilities to support high-end functions such as natural language processing, speech recognition, and image recognition. As AI technology continues to develop, the AI performance and data processing capabilities of chips will become key factors in market competition. Car safety is one of the top concerns among consumers. Smart cockpit integrated chips need to meet strict automotive industry standards such as AEC-Q100 and ISO 26262 to ensure stable operation in various harsh environments and the ability to quickly respond to potential security threats. This will require chip manufacturers to have deep accumulation and innovation capabilities in hardware design, software algorithms, security mechanisms, etc.
