## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive Interior Slides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of automotive interior slides reached 235 million units, with an average selling price of \$12.80 per unit. Automotive interior slides are primarily used in seat adjustment, center armrests, door panel mechanisms, and sliding storage components. Featuring high strength, low noise, wear resistance, and compact construction, they are crucial components for enhancing vehicle comfort and modular assembly. Upstream raw materials include cold-rolled steel sheets, stainless steel strips, aluminum alloy profiles, and plastic bushings. Core suppliers include Baosteel, Nippon Steel, Novelis, Constellium, and SABIC. Global production capacity is approximately 270 million units per year, with an average industry gross profit margin of 15%-20%. Passenger car seat slides account for approximately 56% of downstream consumption, high-end SUV and MPV multi-directional adjustment systems for 28%, and railcar and special vehicles for 16%. Steel accounts for 62% of the total upstream material cost, aluminum and plastic parts for a combined 24%, and the remainder for processing and assembly. In the future, this product will develop towards lightweight, electrified and intelligent cockpit slide systems, and the application trend will focus on electric memory slides, silent guide rails and modular quick-install structures to meet the needs of new energy vehicles and high-end cockpit comfort improvement.

The global Automotive Interior Slides market size was estimated at USD 3009.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
