Report Overview

Automotive interlayer films are specialized polymeric layers used in laminated automotive glass to enhance safety, performance, and comfort. These films, commonly made from materials such as PVB (polyvinyl butyral) or EVA (ethylene-vinyl acetate), are positioned between glass panes. They play a vital role in holding glass fragments together during impact, thus reducing the risk of injury and improving occupant protection. Additionally, automotive interlayer films contribute to sound insulation, minimizing road noise, and offer UV protection to shield vehicle interiors from harmful sunlight. They also help in reducing glare and enhancing the overall durability and performance of automotive glazing systems.
