Abstracts

Automotive laminated glass is a specialized safety glass product consisting of two or more glass layers bonded together with one or more interlayers, typically made of polyvinyl butyral (PVB) or ethylene-vinyl acetate (EVA), which hold the glass in place if shattered. This construction not only prevents the glass from breaking into sharp, dangerous fragments but also provides enhanced acoustic insulation, UV resistance, and structural integrity, contributing to occupant safety, comfort, and vehicle security. It is predominantly used in windshields and increasingly in side and rear windows, sunroofs, and heads-up display systems, meeting stringent automotive safety standards globally while also supporting advanced driver-assistance systems (ADAS) and connectivity features through compatibility with sensors and antennas embedded in or mounted on the glass.

The global Automotive Laminated Glass market size was estimated at USD 18500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
