Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive LCD Screen competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An automotive LCD screen is a liquid crystal display used in vehicles to present visual information such as speed, navigation, entertainment, rear-view camera images, and system status. These screens are commonly found in instrument clusters, center consoles, head-up displays, and rear-seat entertainment systems. Designed to withstand harsh automotive conditions, they feature high brightness, wide temperature tolerance, vibration resistance, and anti-glare or anti-reflective coatings for visibility in sunlight. Automotive LCDs come in various technologies such as TFT (Thin-Film Transistor), IPS (In-Plane Switching), and LTPS (Low-Temperature Poly-Silicon), offering high resolution and energy efficiency to enhance both driver safety and user experience. Annual shipments of this product are less than 100 million units. The price per unit of LTPS LCD products is higher than that of traditional a-Si LCD products, with an average selling price of approximately US\$70 per unit. The gross profit margin for this product is between 15% and 20%. The upstream of the automotive LCD screen market mainly includes raw material and component suppliers, such as glass substrates, polarizers, backlight units (BLUs), driver ICs, and liquid crystal materials, along with TFT array and module manufacturers who assemble display panels. The downstream consists of automotive OEMs and Tier-1 suppliers (e.g., Continental, Denso, Bosch, and Visteon) who integrate these LCD modules into vehicle systems such as instrument clusters, infotainment displays, and head-up displays. Ultimately, the displays are delivered to automobile manufacturers for installation in passenger cars, commercial vehicles, and EVs, where they enhance driver information, connectivity, and user experience.

The global Automotive LCD Screen market size was estimated at USD 5125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
