### Report Overview:

A combination of light weight, high specific strength, and good castability makes magnesium alloys a promising engineering material for the automotive and aerospace industries. Mg-Al-based alloys, especially the AZ and AM series, combine good room-temperature strength and ductility with satisfying salt-spray corrosion resistance and excellent castability.

Vehicle weight reduction is one of the major means available to improve automotive fuel efficiency. High-strength steels, aluminum (Al), and polymers are already being used to reduce weight significantly, but substantial additional reductions could be achieved by greater use of low-density magnesium (Mg) and its alloys. Magnesium alloys are currently used in relatively small quantities for auto parts, generally limited to die castings, e.g., housings.

The Global Automotive Magnesium Alloy Market Size was estimated at USD 1273.13 million in 2023 and is projected to reach USD 1932.15 million by 2029, exhibiting a CAGR of 7.20% during the forecast period.
