Abstracts

An automotive mirror actuator is an electromechanical device responsible for adjusting the position of side-view and rearview mirrors in vehicles, primarily enabling remote control functionality for improved driver visibility, convenience, and safety. It typically consists of small electric motors, gears, and control circuitry that respond to input from a switch or controller inside the vehicle, allowing precise multidirectional movement of the mirror glass. Modern actuators may also incorporate features such as memory settings, automatic folding, heating elements for defogging, and integration with advanced driver-assistance systems (ADAS) like blind-spot detection. The component is essential in both manual and power-adjustable mirror systems, with higher-end variants supporting automation and connectivity to vehicle networks for enhanced functionality.

The global Automotive Mirror Actuator market size was estimated at USD 188.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.53% during the forecast period.
