## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive MR Damper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global automotive MR damper production reached 142,000 units, with an average selling price of US\$486 per unit. Automotive MR dampers are intelligent vibration reduction systems that utilize the instantaneous viscosity change of magnetorheological fluid under a magnetic field to achieve adjustable damping force. They are a key component of modern vehicle active or semi-active suspension technology. They combine the sensitivity of electronic control with the stability of hydraulic damping, responding to vehicle state changes in milliseconds and effectively balancing comfort and handling. They are widely used in luxury passenger cars, high-performance sports cars, electric vehicles, and smart self-driving cars. From an industry chain perspective, the upstream sector includes magnetorheological fluid raw materials (primarily carbon-based ferromagnetic particles and a carrier fluid system), electromagnetic coils and drive power supplies, sealing components, and high-precision piston manufacturing; the downstream sector is the vehicle manufacturer. In terms of gross profit margin, due to high material and control module costs, mainstream manufacturers generally maintain a gross profit margin between 30% and 45%. Products for high-performance or specialized vehicles can exceed 50%.

The global Automotive MR Damper market size was estimated at USD 69.01 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
