Abstracts

Automotive near-field projection technology is an advanced system that projects visual information, such as warnings, navigation directions, or contextual symbols, directly onto the road surface or nearby areas in a vehicle's immediate vicinity. This technology uses high-resolution projectors, often integrated into headlights or external lighting systems, to enhance driver awareness and safety. By providing real-time, intuitive visual cues in the driver's field of view, it reduces the need to glance at in-cabin displays and improves reaction times. Applications include lane guidance, hazard alerts, pedestrian warnings, and adaptive roadway markings, contributing to safer and smarter driving experiences.

The global Automotive Near Field Projection Technology market size was estimated at USD 111.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
