Abstracts

The car NFC keyless entry system is a device that uses NFC technology to achieve keyless entry into the vehicle. It installs a sensor chip on the vehicle door handle. When the owner carries a mobile phone or smart card with NFC function, the door can be unlocked and the vehicle started as long as it is within a certain range of the vehicle. This system can avoid the problems of inconvenient portability and easy loss of traditional keys, while also improving vehicle safety. Because only authorized users can gain access to the vehicle using the system, unauthorized users cannot gain access. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.

The global Automotive NFC Keyless Entry System market size was estimated at USD 3473.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
