### Report Overview

Automotive Noise Filter is a type of filter that acts as a passive low-pass filter consisting of an inductor and a capacitor in a car. It can attenuate transient interference signals in a car's power supply system. It completely filters out and can prevent the interference noise generated in the internal circuit design of automotive electrical equipment (such as car audio) from being reversely connected into the vehicle power supply system through the power line, polluting the power supply environment of other electrical equipment.
