## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive Noise Reduction Sensor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Automotive Noise Reduction Sensor reached approximately 132,641 units, with an average global market price of around US\$ 1263.48 per unit. Gross margin is about 43%. The cost is 720.18 usd. Production Capacity is about 140,000-150,000 units. Automotive Noise Reduction Sensor is a specialized automotive sensor used in active noise control (ANC) systems to detect and reduce road-induced noise inside a vehicle cabin. It typically works by capturing vibration or acoustic signals generated by tire-road interaction through accelerometers or microphones placed near the suspension, chassis, or wheel wells. These signals are processed in real time by the vehicle's noise control unit, which generates counteracting sound waves via the audio system to cancel unwanted noise. The upstream supply chain for Automotive Noise Reduction Sensors primarily includes MEMS microphones, accelerometers, signal processing chips, automotive wiring harnesses, packaging materials, and other components, along with electronic manufacturing service providers. The midstream comprises automotive parts manufacturers and system integrators responsible for matching and integrating the sensors with Active Noise Cancellation (ANC) control units, in-vehicle audio systems, and vehicle body structures. Downstream users include original equipment manufacturers (OEMs) and end-users such as new energy vehicle and luxury car brands, who utilize these sensors to enhance cabin quietness and driving comfort. With accelerating trends toward smart cockpits and electrification, demand for such sensors continues to grow in high-end passenger vehicles and intelligent driving cars.

The global Automotive Noise Reduction Sensor market size was estimated at USD 168.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
