Abstracts

Automotive occupant sensing systems use camera sensors to understand human behavior and monitor passenger movements. Thanks to automotive occupant sensing systems, vehicles are able to adapt to the interior environment by learning user characteristics, such as their posture, and subsequently adjusting factors such as room temperature or driving mode. In addition, the strength and deployment time of the airbags can be adjusted to each passenger's position and size in the event of an accident. Automotive occupant sensing systems' functions include: 1) Seamless entry into the car: When the user approaches the sensor, it can quickly complete the identification of the living body and perform identity recognition without any movement coordination, actively open the car door for the user, and quickly log in to the car system. 2) Safe takeover: By analyzing the driver's attention, it is ensured that the driver can take over the vehicle in autonomous driving state in time at critical moments. 3) Safety monitoring: According to the driver's different fatigue levels, timely warning or termination of dangerous driving behaviors can be carried out to reduce accidents. It also includes behavioral monitoring of distraction, smoking, talking on the phone, and seat belts. 4) Child care: By comprehensively analyzing facial attributes, human bone proportions and length information, children are identified, the child care function is actively triggered, the status and behavior of the children are continuously monitored, and real-time feedback is given to the parents in the front row to remind them to take necessary measures. 5) Multiplayer entertainment: Open up the interactive space in the front and rear rows, and use a variety of natural body language interaction methods such as sight, gestures, head movements, etc. to achieve convenient interaction between multiple people and multiple locations.

The global Automotive Occupant Sensing Systems market size was estimated at USD 2034.52 million in 2024 and is projected to grow at a compound annual growth rate
