Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive OEM Rear-Seat Entertainment Display competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Automotive OEM rear-seat entertainment display is an in-vehicle screen factory-fitted by the automaker and dedicated to second-row and rear passengers, typically integrated into headrests, seatbacks, center armrests or roof-mounted units. It is built around an automotive-grade TFT-LCD or OLED panel combined with a display driver board, multimedia SoC, A/V interfaces, connectivity and power electronics, and is connected via CAN, Ethernet or similar networks to the cockpit domain controller or infotainment head unit. The system supports local media playback, online streaming, smartphone mirroring, navigation repeat, rear-seat climate or seat control and other linked functions. Compared with aftermarket devices, OEM rear-seat displays must comply with stringent automotive requirements for reliability, functional safety and EMC, and are tightly integrated into the vehicle's multi-screen cockpit HMI and brand experience. In the rear-seat entertainment display value chain, the upstream comprises panel manufacturers (automotive-grade TFT-LCD/OLED, backlight and touch modules), driver IC and infotainment SoC vendors, memory and power-management IC suppliers, as well as mechanical housings, harnesses and cover glass. Midstream automotive display module makers and infotainment Tier-1s integrate these components into qualified display assemblies, including brackets, cooling, EMC design and software integration with the cockpit domain controller. Downstream, the products are supplied either as OEM factory-fit options. In 2024, global automotive OEM rear-Seat entertainment display production reached approximately 5.5 million units, with an average global market price of around US\$ 220 per unit.

The global Automotive OEM Rear-Seat Entertainment Display market size was estimated at USD 1230.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
