Abstracts

Automotive optical sensors including infrared (IR) sensors, cameras, and LiDAR are used to understand the vehicle environment and prevent hazards or accidents. Accumulation or penetration of foreign materials such as dirt, road salt, slush, snow, bugs, and several other environment-related materials causes obstruction in these sensors, which leads to degraded performance or malfunction. This creates a demand for cleaning systems that maintain sensors in optimal working conditions. The optical sensor cleaning system consists of a discharge port or nozzle that discharges the cleaning fluid toward the lens of the sensor. This fluid stream or spray removes foreign material collected on the lens. The sensor and the discharge port are relatively movable, which directs the cleaning fluid on the desired location of the sensor.

The global Automotive Optical Sensor Cleaning System market size was estimated at USD 480.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
