Report Overview

OTA stands for Over-the-Air Test System. It is a method for evaluating the performance and functionality of wireless devices such as smartphones, tablets, and IoT devices in real-world wireless environments. Automotive OTA test systems use anechoic or reverberant chambers to create a simulated wireless environment. Automotive equipment is placed in the test chamber and various tests are performed to measure parameters such as signal strength, call quality, data throughput, antenna performance and power consumption. By using OTA testing services, automakers can evaluate the wireless performance and reliability of their equipment, identify any potential issues, and make improvements before the equipment is released to the market. This ensures that the equipment meets the required standards and provides optimum performance to the end user.
