Abstracts

Automotive coatings, like most Other, are used mainly to provide protection and decoration. Water-based acrylic polyurethane enamel paint is currently the most widely used paint for reasons including reducing paint's environmental impact. Modern automobile paint is applied in several layers, with a total thickness of around 100 μ m(0.2mm). Paint application requires preparation and primer steps to ensure proper application. A basecoat is applied after the primer paint is applied. Following this, a clearcoat of paint may be applied that forms a glossy and transparent coating. The clearcoat layer must be able to withstand UV light.

The global Automotive Paints And Coatings market size was estimated at USD 19500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.01% during the forecast period.
