Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive Parking Heaters competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Automotive Parking Heaters production reached approximately 7.5 million units, with an average global market price of around US\$ 102 per unit. Getting into a freezing car in the dead of winter is one of those things everyone dreads, especially if it means wasting time scraping ice off the windshield in the morning. Parking heaters are the innovative solution to this problem, as they are a cost effective and simple way to warm the inside of a vehicle before you actually get in it. Parking heaters are electro-mechanical devices equipped with various sensors and microprocessors. Available to almost any vehicle that requires warming (think RVs, trucks, buses, boats), parking heaters are able to warm a vehicle without the engine running, and their structure and design is different from traditional heating systems for car cabins. Using air or liquid, parking heaters heat both the interior and the engine of a vehicle to a temperature that makes getting into the car more bearable on cold mornings. There are many different types of parking heaters with different advantages, such as air based, coolant based, electric, or diesel parking heaters. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the

United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.

The global Automotive Parking Heaters market size was estimated at USD 765.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
