Abstracts

The automotive parking lamp, also known as a position lamp or sidelight, is a low-intensity lighting device mounted on the front and rear corners of a vehicle, designed to increase visibility and indicate the vehicle's presence and width to other road users when headlights are not required, such as during dusk, dawn, or in low-visibility conditions like rain or fog. These lamps serve a critical safety function by making the vehicle conspicuous without causing glare, and they are often integrated into the same housing as turn signals or daytime running lights in modern vehicle designs. Regulatory standards, such as those set by the UNECE and FMVSS, dictate specific requirements for their color, intensity, and placement to ensure uniformity and effectiveness across markets.

The global Automotive Parking Lamp market size was estimated at USD 3250.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
