Abstracts

The automotive plastic spoiler refers to an aerodynamic component attached to a vehicle body—typically at the front, rear, or sides—to manage airflow, reduce lift, enhance stability, and improve fuel efficiency at higher speeds; it is primarily manufactured using injection-molded thermoplastics such as polypropylene (PP), acrylonitrile butadiene styrene (ABS), or polycarbonate blends, which offer advantages in weight reduction, design flexibility, corrosion resistance, and cost-effectiveness compared to traditional materials like metal or carbon fiber. These components are widely used in both aftermarket customization and original equipment manufacturer (OEM) applications, serving functional purposes in performance and efficiency-oriented vehicles as well as aesthetic roles in sporty and luxury segments.

The global Automotive Plastic Spoiler market size was estimated at USD 1520.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
