Report Overview

Automotive Powertrain refers to the integral system in a vehicle that generates power and transmits it to the wheels to propel the vehicle. It is a critical component of a vehicle's performance and efficiency. The powertrain typically consists of three main parts: the engine, the transmission, and the driveline. The engine, which can be internal combustion, electric, or hybrid, generates power. The transmission, either manual or automatic, modifies the power output from the engine to control the vehicle's speed and torque. The driveline, which includes components like the driveshaft and differential, transfers the power from the transmission to the wheels. The design and configuration of the powertrain significantly influence a vehicle's fuel economy, emissions, and overall performance.
