Abstracts

Automotive rear-exit exhaust systems are subsystems of a vehicle's overall exhaust system, designed to collect and discharge the exhaust gases generated by the engine at the rear of the vehicle. They typically consist of components such as the exhaust manifold, exhaust pipe, catalytic converter, exhaust temperature sensor, muffler, and tailpipe. After the exhaust gases are expelled from the engine cylinders through the exhaust valves, they are gathered by the exhaust manifold and then flow into the exhaust pipe. Next, the catalytic converter purifies the harmful substances in the exhaust gases. The muffler reduces the noise of the exhaust gases, and finally, the purified and silenced exhaust gases are discharged outside the vehicle through the tailpipe at the rear. These systems play a crucial role in reducing environmental pollution and noise pollution caused by exhaust gases, improving the driving comfort and meeting the requirements of exhaust emission standards.

The global Automotive Rear-Exit Exhaust Systems market size was estimated at USD 17460.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
