Abstracts

An automotive rod antenna is a type of external antenna mounted on vehicles, typically on the roof, fender, or trunk, designed to receive broadcast signals for AM/FM radio, satellite radio, GPS, and, in some cases, cellular or terrestrial digital broadcasts. These antennas are characterized by their rigid, elongated structure, often made of materials like stainless steel or carbon fiber, and may be fixed or retractable, with some modern versions incorporating amplified or multi-band capabilities to enhance signal reception across varying frequencies and driving conditions. While increasingly supplemented or replaced by integrated shark-fin antennas or embedded glass antennas in newer vehicles, rod antennas remain prevalent in many automotive segments due to their cost-effectiveness, reliability, and ease of replacement.

The global Automotive Rod Antenna market size was estimated at USD 125.7 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.20% during the forecast period.
