Report Overview

Automotive Shredder Residue (ASR) is the non-metallic waste material left over after vehicles are shredded and processed for metal recovery in recycling operations. When end-of-life vehicles (ELVs) are dismantled, valuable metals like steel, aluminum, and copper are extracted, leaving behind a mixture of materials including plastics, rubber, glass, textiles, and sometimes hazardous substances. This residue is often referred to as 'fluff' due to its lightweight and fibrous nature. ASR poses environmental challenges due to its heterogeneous composition and the presence of potentially harmful substances, making it difficult to recycle or dispose of safely. Managing ASR requires innovative solutions such as advanced sorting technologies, energy recovery, and materials recycling to minimize environmental impact and comply with regulations aimed at reducing landfill waste from automotive sources.

The global Automotive Shredder Residue (ASR) market size was estimated at USD 1050 million in 2023 and is projected to reach USD 1850.70 million by 2032, exhibiting a CAGR of 6.50% during the forecast period.

North America Automotive Shredder Residue (ASR) market size was estimated at USD 304.94 million in 2023, at a CAGR of 5.57% during the forecast period of 2024 through 2032.
